

Recommendation Letter

推荐信

I would like to extend my gratitude for the E6 Chest Compression System from Ambulanc

Shenzhen Company. They now have settled in our emergency department.

First in comparison to other CPR devices the thoughtful ideal of compression and

ventilation automatic combination mode have convinced us. It is quite useful to improve

the resuscitation efficiency.

And E6 CPR is the first to have EtCO2 monitoring system to testify resuscitation quality.

We are really excited about it. It saves our time and improve our qualification.

我们急诊科最近安装了安保科技的 E6 自动心肺复苏机，这里我要对安保科技公司提供的 E6 胸外按压系统表示感谢。

首先，与其他 CPR 设备相比，按压和通气自动组合模式的设计让我们信服，这对于提高复苏效率非常有用。

而且，E6 CPR 是第一个拥有 EtCO2 监测系统来证明复苏质量的心肺复系统。

我们对此感到非常兴奋，它节省了我们的时间并提高了我们的心肺复苏质量。
