

灵宝市第一人民医院
THE FIRST PEOPLE HOSPITAL OF LINGBAO

Recommendation letter

E6 (Chest Compression system from Amoul) is a wonderful machine that has already saved several lives in our hospital. We represent the hospital and patient gratitude to Amoul who invent E6.

First of all, electronically driven and controlled 2 batteries can work for 90 mins (we can use it independently, without gas, AC power and quick install). Deliver chest compressions at recommended rate and depth while allowing for chest recoil via a suction cup. More consistent rate and depth, and increased blood flow to the heart and brain, a higher chance of return of spontaneous circulation. And E6 can work with T5 ventilator by Wi-Fi or Bluetooth (compression model is 30:2; 15:2) ensures the effectiveness of CPR. And ETCO2 module is a very important resuscitation instruction by AHA and ERC.

We very much appreciate the AUTO-CPR system (E6) and appreciate the Amoul. It saves more lives and saves more families.

推荐信

E6 (安保科技的胸外按压系统) 是一台很棒的机器, 它已经在我们医院内挽救了数条生命。我们代表医院和患者感谢发明 E6 的安保科技

首先电动电控, 2 节电池可以工作 90 分钟 (我们可以在紧急情况下使用, 无需气源, 交流电源, 快速安装) 以推荐的频率和深度进行胸部按压, 同时允许通过吸盘进行胸部回弹。更一致的速度和深度, 增加心脏和大脑的血流量, 自主循环恢复的机会更高。并且 E6 可以通过 wifi 或蓝牙与 T5 呼吸机配合使用 (压缩模式为 30:2; 15:2) 保证了 CPR 的有效性。而 ETCO2 模块是 AHA 和 ERC 非常重要的复苏指导。

我们非常感激 AUTO-CPR 系统 (E6) 和 安保科技。它拯救了更多的生命, 拯救了更多的家庭。
